

HRGreen

Partners in the
water business

Reliable delivery of high quality potable and process water at an affordable price is a critical component of your success. Look to HR Green for a unique fusion of engineering and business acumen, helping public and private utilities and wet process industries keep the water running sustainably and cost-effectively. From small communities to major industries and metropolitan cities, we pay attention to the unique business concerns of each client. HR Green offers services for every step of your journey: design, construction, ownership and operation.

Potable Water Services

- Master Planning
- Aquifer Evaluation
- Groundwater Modeling
- Environmental Management
- Rate Studies
- Production Wells (Vertical & Collector)
- Source Development
- Treatment
- Residuals Handling and Disposal
- Storage
- Security
- Pumping Stations
- Distribution System Modeling and Design

+Design

Good outcomes begin with a solid plan. Starting with master planning and feasibility studies, we can help identify the best sources of groundwater or surface water. With a master plan in place and sources identified, HR Green helps develop and implement the plan in ways that minimize risk and maximize reward. Our engineers make accountable decisions in the planning and design of well fields, reservoirs, treatment plants, storage, pumping and distribution systems.

+Construct

Even the best laid plans can unravel without solid leadership during construction. We offer a variety of construction models to satisfy schedule, budget and legal requirements. These include providing more traditional construction services while a project is under construction through the traditional design-bid-build process, or, we can team with construction partners to expedite the construction of facilities using alternative delivery methods. In any case, our goal is always the same – a project delivered on time, within budget, and according to plans and specifications.

+Own

One of an owner's biggest challenges is finding the funds to improve and expand water infrastructure. Our funding specialists partner with facility owners to identify sources and secure funding that meets the need. Strategies range from tried-and-true sources – grants, loans, bonds, rate adjustments – to today's emerging new alternatives, such as public-private partnerships (P3). Through rate studies or cost-of-service analyses, look to HR Green to help improve your bottom line.

+Operate

The operator's perspective informs everything we do, including design. We work with you to get your facility running and continue to be there to help maintain the viable operation of source, treatment and distribution systems. HR Green offers system modeling, GIS, and on-call troubleshooting services, responding expediently to challenges as they arise. We also offer contract operations and operator-of-record services for industries, utilities, and municipalities that prefer to outsource these functions.
